AB - JP2003039027 NOVELTY - Cleaning method of textiles involves primary
washing textile having adherent chlorhexidine gluconate with a liquid
containing an alkali builder and a surfactant, after performing
preliminary washing. The preliminary washing is carried out using a
liquid having hardness of 2-15 deg. DH and pH of 3-8.
- USE - For washing textiles used in hospitals such as pillow covers and
surgical gowns.
- ADVANTAGE - The cleaning method effectively removes chlorhexidine
gluconate (disinfectant) adhered to the textiles, and suppresses color
change of textiles due to the disinfectant.
